Percentage of Progress:

We have already completed seven tasks within this week, but we are only 27.42% through our whole project. We are focusing on the front end first and plan to finish the front end in two sprints.

SPRINT RETROSPECTIVE

WHAT WENT WELL?

- Even though the first sprint hasn't started yet, we have already begun with baby steps. We have built our Angular project library and started the interfaces for log in and sign up. We have also set up each component for our features and the template for the homepage. We have already completed our log in interface and sign up interface.

WHAT COULD BE IMPROVED?

- Since we are just starting this project again, we are beginning slowly because we are still figuring things out, such as handling pull requests and coordinating schedules for coding together.
- Additionally, as the project manager, I will try to improve how I get updates on the progress of each task. We also made a schedule for each pull request and coding session.

WHAT NEEDS TO BE DONE?

- For Sprint 1, we will continue our progress with the front end or interface of our website, and we will also try to connect each feature together afterward.
  - Homepage Interface
  - Community Interface
  - Search Interface
  - Recipe Details Interface
  - Profile Interface
- For Sprint 1, we will continue our progress with the front end or interface of our website. We will also connect each component together and create a flowchart for our entire website.
- For Sprint 1, we will continue our progress with the front end or interface of our website. We will also connect each component together, create a flowchart for our entire website, and fix the connection between the login and sign-up interfaces.
