# INNOVATECH

PROJECT PROGRESS

Percentage of Progress:

For Sprint 5, we had a total of 15 tasks, each of which was assigned to my team. We almost accomplished all the tasks for this sprint, with just a few tasks to carry over to the next sprint. The upcoming sprint will focus more on fetching and displaying data to the frontend. Overall, we have completed a total of 41 tasks since Sprint 1, and there are still more tasks to do. Our current project progress is 71.92% complete from Sprint 1 to Sprint 5, and there are still tasks to do and tasks in progress.

Completed Tasks List:

Sprint 4 ··· ○ 🗓 6/10/2024 - 6/15/2024

✅ **COMPLETE**   9   ···   + Add Task

Name	Assignee	Due date	Status
✅ Connect Database in mysql	CA K	Jun 11	✅ COMPLETE
✅ Finalize Frontend All Features	CA	Jun 11	✅ COMPLETE
✅ Recipe Details	RA CA	Jun 14	✅ COMPLETE
✅ Sign up - (Add user to users table from db) ≡	MA	Jun 14	✅ COMPLETE
✅ Profile Layout ≡	K	Jun 14	✅ COMPLETE
✅ Fix kung saan mapupunta si user kapag di nakalog in	MA	Jun 14	✅ COMPLETE
✅ Reflect the Carousel View from Backend to Frontend	CA	Jun 14	✅ COMPLETE
✅ Add Recipe (Frontend and Function)	K	Jun 14	✅ COMPLETE
✅ Search Button Function	RA SS	Jun 14	✅ COMPLETE

SPRINT 5 PROGRESS

Sprint 5
▾ **Sprint 5** ··· ○ 🗓 5 days ago - Today

▾ ✅ **COMPLETE**   11   ···   + Add Task

Name	Assignee	Due date	Status
✅ Make the edit profile functionality works (backend)	K	Today	✅ COMPLETE
✅ Make the search bar works when I search recipe	RA	Today	✅ COMPLETE

✅ Snack Bar in Warning or successful messages	K CA MA RA SS	Today	✅ COMPLETE
✅ Fix the add recipe reflected to the actual user	K	🗓	✅ COMPLETE
✅ Try to make that when user first sign up yung username makikita	K	Today	✅ COMPLETE
✅ Modify the Routine after Logging In ≡	MA	Today	✅ COMPLETE
+ Add Task			

▾ ⦿ **IN PROGRESS**   2   ···   + Add Task

Name	Assignee	Due date	Status
⦿ Use case test	SS	🗓	⦿ IN PROGRESS
⦿ In Latest Recipe you made (Make that there's message when user's not log in)	CA	Today	⦿ IN PROGRESS

SPRINT 6 PLANNING

⦿ **TO DO**   9   ···   + Add Task

Name
⦿ When I search an ingredient it will work (backend)
⦿ Fix the display when first enter on the website
⦿ Display Popular Categories from backend to Frontend
⦿ Display the Latest Recipe in Frontend reflected in db
⦿ Modify community component (username)
⦿ Add comment function in community component
⦿ Make the saved recipes working from db to frontend
⦿ Add functionality to Meal Planning
⦿ User can change their profile avatar

SPRINT RETROSPECTIVE

WHAT WENT WELL?

- For Sprint 5, I believe this sprint went well because we were able to finish almost all of the important backend tasks needed for our application. We successfully accomplished functions such as adding recipes and displaying recipe details, both of which are reflected in our backend/database. These two functions are among the most important features of our application, so we are happy we were able to complete them.

- There are still many things we need to display, and we are focused on the GET method and fetching the inputted details from the database. It's quite challenging because we can't fully focus on our project due to quizzes in different subjects that we also need to review for.

WHAT COULD BE IMPROVED?

- We need to speed up because the mock defense is approaching, and we know that many parts of our application still need to be polished and fixed.

- Also, I need to prioritize the time and due dates set for each task. As a PM, I noticed that some tasks are not suitable for a one-week timeline, so I need to learn to manage the due dates I assign more effectively.

WHAT NEEDS TO BE DONE?

- For Sprint 5, we will continue working on our backend by fetching and displaying details from our database, polishing some parts of our application, and testing if everything is still working.

- These are some tasks for Sprint 5:
    - The search based on ingredients functionality
    - The needed contents that display in home page
    - Fixed the community page
    - Meal Planning and saved recipes from User Profile
    - Changed profile avatar from User Profile
